ABSTRACT

This document, fifth in a series of 11 subvolumes of a handbook prepared to provide training for educational research and development personnel in the development of instructional materials, deals with the task of planning simulation based on instructional and logistical needs. The document content is arranged according to the sequential order of the two steps involved in performing the task. Step 1, assessing simulation needs, involves (a) determining whether simulation decisions should be made for an individual or for a series of lesson units; (b) inspecting task analysis diagrams and statements of objectives for the need to provide simulation; and (c) deciding whether to simulate. Step 2, planning the type of simulation to be used, involves: (a) identifying from task analysis diagrams and from mode analysis results key properties of inputs, actions, or outputs which require simulation and recording results; (b) planning and recording the simulation of inputs, actions, and outputs; and (c) selecting a simulation plan which both meets instructional needs and does not create an unacceptable logistical burden. FOREWORD

This is one of a series of eleven HANDBOOK sub-volumes which has been prepared to provide training for educational R&D personnel in the development of instructional materials.

The USER'S MANUAL, which accompanies the series, describes the role each volume is designed to play and the sequence recommended for its use in the training process. The user is, therefore, urged to read the Instructions in the USER'S MANUAL before using this or any other separate volume.

ACKNOWLEDGMENTS

The materials in this volume were prepared under a contract from the U.S. Office of Education, Contract No. OEC-O-70-4776(520). Dr. George L. Gropper, Director of Instructional Media Studies, served as principal investigator.

U.S.O.E. sponsorship does not in any way imply official endorsement of the views expressed in this volume.

The author is indebted: to Dr. Robert Fitzpatrick for reviewing portions of the series of volumes and for informal discussions concerning several training issues; to Mrs. Zita Glasgow for the first and critical use of this volume; and, not least, to Miss Kathleen Gubala for her tireless preparation of the complex manuscript required by this HANDBOOK.

TASK

E

PLAN SIMULATION BASED ON INSTRUCTIONAL
AND LOGISTICAL NEEDS

E

STEPS

E.1

Assess simulation needs

1

SUB-STEPS

E.1.1

Determine whether simulation
decisions should be made for
individual or for a series
of lesson units

5

E.1.2

Inspect task analysis diagrams
and statements of objectives
for logistical and/or instruc-
tional reasons for the need to
provide simulation

11

E.1.3

Decide whether to simulate

29

E.2

Plan type of simulation
to be used (when needed)

35

E.2.1

Identify from task analysis
diagrams and from mode analysis
results key properties of
inputs, actions, or outputs
which require simulation.
Record results

39

E.2.2

Plan and record the simulation
of inputs, actions, and outputs

49

E.2.3

Select a simulation plan which
both meets instructional needs
and does not create an
unacceptable logistical burden

65

STEP

E.1

E.1

Assess simulation needs.

E.1.1

Determine whether simulation decisions should be made for an individual lesson or for a series of lesson units.

E.1.2

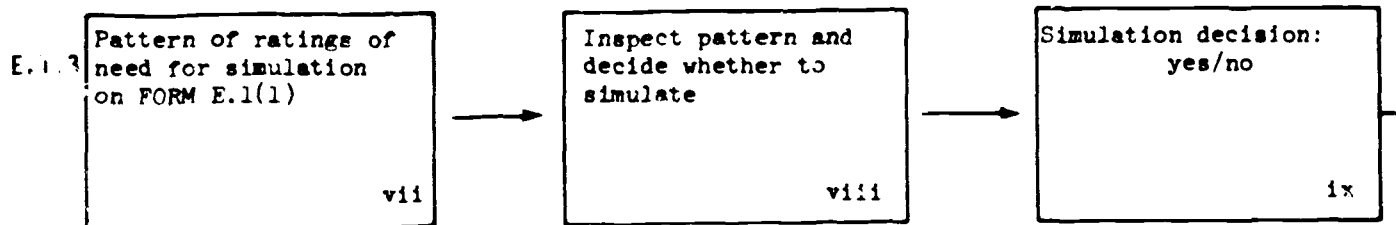

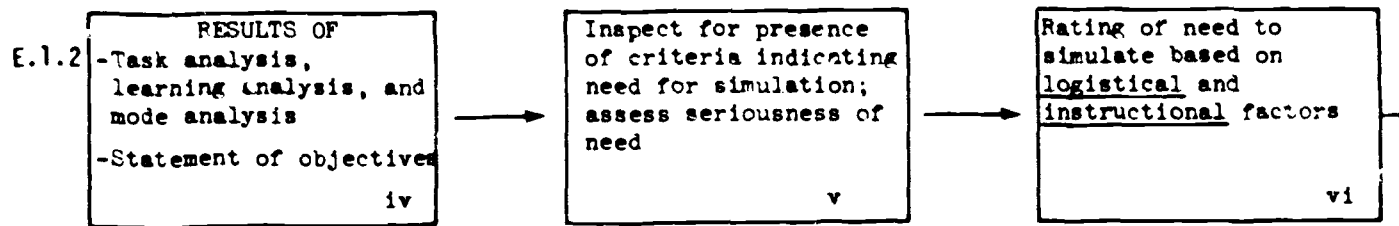

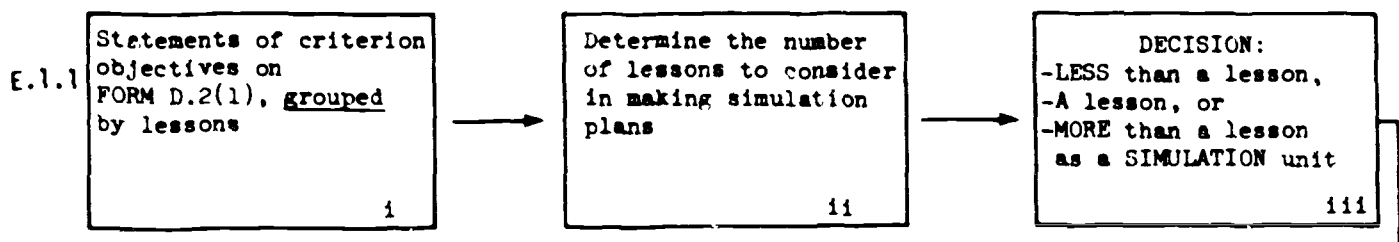

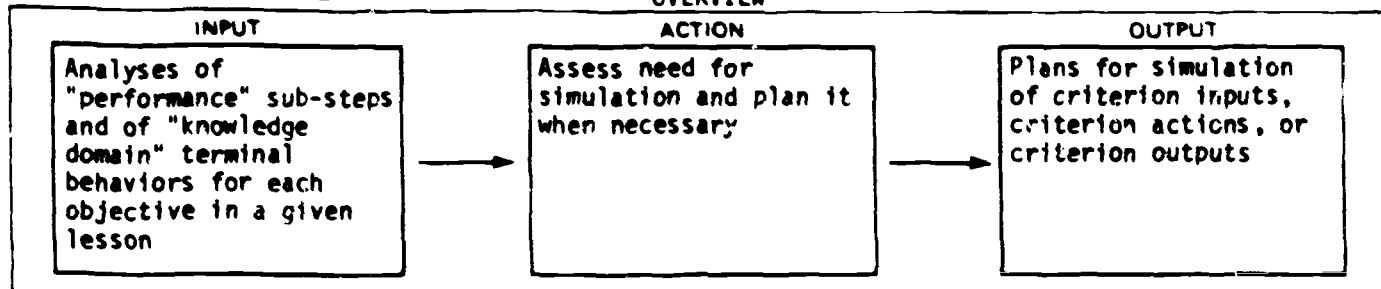

Inspect task analysis diagrams and statements of objectives for logistical and/or instructional reasons for the need to provide simulation.

E.1.3

Decide whether to simulate.

STEP **E.1**

E.1.2
IDENTIFICATION
MATRIX

CRITERIA FOR IDENTIFYING TYPES OF PERFORMANCE SITUATIONS
ABOUT WHICH SIMULATION DECISIONS MIGHT BE MADE

PERFORMANCE SITUATIONS	Performance during: PREPARATORY PRACTICE a.	Performance during: CRITERION PRACTICE b.	Performance on: CRITERION TESTS c.
CRITERIA	<ul style="list-style-type: none"> -Prior to criterion practice: •Practice of non-criterion behaviors designed to make practice of criterion behaviors possible 	<ul style="list-style-type: none"> -During instruction or during training: •Practice of criterion behaviors: e.g., actual "performance" sub-steps e.g., actual "knowledge domain" terminal behaviors 	<ul style="list-style-type: none"> -Following instruction or following training: •Test of criterion behaviors

EXAMPLES*	1a. ENGLISH -Choosing from four options the noun which is in the plural form	1a. ENGLISH -Given a plural noun, responding with the proper form of the verb "to be"	1a. ENGLISH -Given singular and plural nouns, some encountered during instruction and some not, responding with the proper form of the verb "to be"
	2a. INTERPRETING RADAR DISPLAYS -Practicing where to look for information	2a. INTERPRETING RADAR DISPLAYS -Practicing interpreting display indications	2a. INTERPRETING RADAR DISPLAYS -Taking a test on a sample of display indications

*These examples illustrate what constitutes: (a) "preparatory" practice; (b) "criterion" practice; and (c) criterion tests. The examples do not necessarily illustrate subject matter or performance areas likely to be simulated.

IDENTIFICATION
MATRIXCRITERIA FOR IDENTIFYING
WHAT MIGHT POTENTIALLY BE SIMULATED

WHAT IS SIMULATED	CRITERION INPUTS AND THEIR PROPERTIES	CRITERION ACTIONS AND THEIR PROPERTIES	CRITERION OUTPUTS AND THEIR PROPERTIES
CRITERIA	<p><u>Properties of inputs:</u> found on the job or found on tests which are the basis for discriminations and/or generalizations to be acquired</p> <p>-<u>Physical properties:</u> •Size, shape, color, etc. •Location, direction •Time</p> <p>-<u>Psychological</u> properties: •Conceptual, symbolic •Behavioral</p>	<p><u>Properties of actions:</u> which are the basis for associations or action generalizations to be acquired</p> <p>-<u>Physical properties:</u> •Direction or duration of movement, etc.</p> <p>-<u>Psychological</u> properties: •Conceptual •Behavioral</p>	<p><u>Properties of outputs:</u> found on the job or found on tests which are the basis for discriminations and/or generalizations to be acquired</p> <p>-<u>Physical properties:</u> •Size, shape, color, etc. •Location, direction •Time</p> <p>-<u>Psychological</u> properties: •Conceptual, symbolic •Behavioral</p>

EXAMPLES	INPUTS	ACTIONS	OUTPUTS
	PHYSICAL PROPERTIES	PHYSICAL PROPERTIES	PHYSICAL PROPERTIES
	<p>e.g., blip on radar screen moving in a particular direction at a particular rate</p> <p>These properties form the basis for discrimi- nations between alternative situations to be detected; there- fore, if the decision to simulate were made, they would be simulated</p>	<p>e.g., how far the golf club is taken in the backswing (depending on club used)</p> <p>This action is associated with differ- ent conditions (how far ball is from hole and which club is used)</p>	<p>e.g., distillate of a chemical reaction having a distinc- tive color and texture</p> <p>These properties form the basis for a dis- crimination between a correct and an incor- rect result of an experiment</p>
	PSYCHOLOGICAL PROPERTIES	PSYCHOLOGICAL PROPERTIES	PSYCHOLOGICAL PROPERTIES
	<p>e.g., pattern of economic indica- tors: rate of rise or fall of unemployment, wholesale prices, cost of living, etc.</p> <p>These properties form the basis for discrimi- nations between alternative situations to be detected; there- fore, if the decision to simulate were made, they would be simulated</p>	<p>e.g., teacher delivery of reinforcement for behavior vs. total ignoring of behavior</p> <p>These actions are associated with types of student behavior</p>	<p>e.g., pattern or degree of cooperation between super- visor and those being supervised</p> <p>These properties form the basis for the determination of the correctness of the actions taken</p>

E.1.2

CRITERIA FOR DETERMINING WHETHER LOGISTICAL FACTORS MAKE
SIMULATION OF CRITERION INPUTS, ACTIONS, OR OUTPUTS DESIRABLE

IDENTIFICATION
MATRIX

FACTORS TO CONSIDER	DOWNTIME	COST	DAMAGE/DANGER
CRITERIA	<p>Use of criterion inputs, actions, or outputs in training or in testing would result in:</p> <p>-Unavailability for regular operations of:</p> <ul style="list-style-type: none"> • Personnel • Equipment, objects • Space • Resources (e.g., utilities) 	<p>Use of criterion inputs, actions, or outputs in training or in testing would result in:</p> <p>-High costs due to use or expenditure of:</p> <ul style="list-style-type: none"> • Personnel • Equipment, objects • Space • Resources, materials 	<p>Use of criterion inputs, actions, or outputs in training or in testing would result in:</p> <p>-Physical danger or damage to:</p> <ul style="list-style-type: none"> • People • Equipment, objects • Locations • Resources <p>-Psychological danger or damage to:</p> <ul style="list-style-type: none"> • People
ROLE OF SIMULATION	To keep necessary resources available for regular operations	To keep costs of training down	To prevent danger or damage to people, things, etc.

E.1.2

EXAMPLES OF THE THREE CRITERIA
FOR DETERMINING THE NEED TO SIMULATE

EXAMPLES	DOWNTIME	COST	DAMAGE/DANGER
EXAMPLES	<p><u>During CRITERION PRACTICE or during TESTING</u></p> <p>e.g., if an actual assembly line were used for training or for testing purposes, it would result in its unavailability for regular production</p>	<p><u>During CRITERION PRACTICE or during TESTING</u></p> <p>e.g., target practice shooting at actual naval vessels would result in prohibitive costs</p>	<p><u>During CRITERION PRACTICE or during TESTING</u></p> <p>e.g., waiting on actual customers as criterion practice or for testing purposes might result in loss of customers</p>
	<p><u>During PREPARATORY PRACTICE</u></p> <p>e.g., if an actual office staff were used during training of a manager, there might be little or no productivity of the staff during that period</p>	<p><u>During PREPARATORY PRACTICE</u></p> <p>e.g., if students (psychologists, biologists) who were not yet fully trained were to use experimental animals (and use them up), this might result in needless high training costs</p>	<p><u>During PREPARATORY PRACTICE</u></p> <p>e.g., if an actual patient were used during the preparatory training of a medical student (before he had fully learned how to perform surgery), this might result in harm to the patient</p>

E.1.2

IDENTIFICATION MATRIX

CRITERIA FOR IDENTIFYING THREE DEGREES OF SERIOUSNESS BASED ON EACH LOGISTICAL FACTOR

LEVELS OF SERIOUSNESS	SERIOUS	AVERAGE	NEGLIGIBLE
<p>DOWNTIME <u>Criteria</u> Unavailability of: People Equipment Materials Space Etc.</p>	<p>-Of <u>major</u> consequences to <u>normal</u> operations or <u>functioning</u>; -<u>No</u> substitutes are available</p>	<p>-Of <u>moderate</u> <u>consequences</u> to <u>normal</u> operations or functioning; -A <u>few</u> substitutes are available</p>	<p>-Of <u>little</u> consequence to <u>normal</u> operations or <u>functioning</u>; -<u>Many</u> substitutes are available</p>
<p>COST <u>Criteria</u> Expense of using: People Equipment Materials Space Etc.</p>	<p>High</p>	<p>Moderate</p>	<p>Low</p>
<p>DAMAGE/DANGER <u>Criteria</u> Risk to: People Equipment Materials Space Etc.</p>	<p>High</p>	<p>Moderate</p>	<p>Low</p>

E.1.2

EXAMPLES OF THREE DEGREES OF SERIOUSNESS FOR EACH LOGISTICAL FACTOR AND ASSOCIATED DEGREE OF NEED TO SIMULATE

EXAMPLES

LOGISTICAL FACTORS	DOWNTIME	COST	DANGER/DAMAGE
--------------------	----------	------	---------------

DEGREE OF SERIOUSNESS

<p>SERIOUS: High Need to Simulate</p>	<p>e.g., applying a computer program to a research problem</p> <p>The use of an actual computer during testing or criterion practice or preparatory practice might tie up the computer, making it unavailable for other activities</p>	<p>e.g., directing a TV dramatic production</p> <p>Use of actual TV production facility during practice training would result in high per trainee costs</p>	<p>e.g., landing a plane on a carrier deck</p> <p>Use of actual carrier deck during preparatory practice might lead to serious accident or damage to carrier</p>
<p>AVERAGE: Medium Need to Simulate</p>	<p>e.g., applying classroom management techniques</p> <p>Teacher practice of classroom management techniques with an actual class might to a moderate extent take the class away from regular activities</p>	<p>e.g., interviewing the public for polling purposes</p> <p>The use of actual paid subjects during practice would be moderately expensive</p>	<p>e.g., driving an automobile</p> <p>Use of an actual auto--particularly in criterion practice or in testing--is not likely to be highly dangerous</p>
<p>NEGLIGIBLE: Low Need to Simulate</p>	<p>e.g., threading a film projector</p> <p>Practicing threading an actual projector is not likely to lead to downtime, particularly if it's not in constant use</p>	<p>e.g., developing photographs</p> <p>The use of actual photographs and developing liquids <u>even</u> during preparatory practice is not likely to result in very high costs</p>	<p>e.g., performing chemistry experiments</p> <p>Carrying out <u>most</u> experiments with actual chemicals is not likely to be dangerous</p>

E.1.2
IDENTIFICATION
MATRIX

CRITERIA FOR DETERMINING WHETHER INSTRUCTIONAL FACTORS
MAKE SIMULATION DESIRABLE

FACTORS TO CONSIDER	INABILITY TO <u>SAMPLE</u>	INABILITY TO <u>STANDARDIZE</u>	INABILITY TO <u>MANIPULATE</u>
CRITERIA	<p>-Waiting for the <u>spontaneous occurrence of inputs</u> (and the actions associated with them) requires a long time for <u>all</u> relevant inputs to be sampled and used in training</p> <p>-Some inputs just do not spontaneously occur very often (yet are relevant and/or important)</p>	<p>-Waiting for the <u>spontaneous occurrence of inputs</u> does not guarantee their appearance with all relevant properties on the basis of which discriminations or generalizations can be made</p> <p>-Difficult to standardize training for all trainees with key properties</p>	<p>-Not possible to change or alter criterion inputs (and associated actions) in order to make learning easier</p> <p>-Not possible to <u>present</u> criterion inputs because they are unobservable</p>
ROLE OF SIMULATION	To sample otherwise unavailable relevant criterion inputs during training	To have key properties of criterion inputs adequately represented	To permit changing the nature of criterion inputs to make preparatory training easier

E.1.2

EXAMPLES ILLUSTRATING EACH OF THE THREE INSTRUCTIONAL CRITERIA
FOR DETERMINING THE NEED FOR SIMULATION

EXAMPLES

EXAMPLES	<p>e.g., in the internship training of a medical student, it would take a long time for actual patients with rare conditions to <u>turn up by themselves</u> (e.g., plaque) simulation of symptoms might therefore be necessary in training</p> <p>e.g., in driver training, training in the actual world might require longer training durations if it were required to wait for all possible driving situations or driving conditions to occur spontaneously (i.e., occur by themselves)</p>	<p>e.g., in training electronic troubleshooting, it might be necessary to simulate key relevant symptoms in isolation from other distractors which would otherwise occur in a criterion situation were used</p>	<p>e.g., in training radar operators to interpret display patterns, it may be necessary to contrast in a simultaneous presentation highly similar patterns which have to be distinguished. In the criterion situation, they occur only serially; therefore simulation would be needed to provide the simultaneous contrast (on one screen successively or on two separate screens)</p>
----------	--	---	--

E.1.2

CRITERIA FOR IDENTIFYING THREE DEGREES OF SERIOUSNESS
BASED ON EACH INSTRUCTIONAL FACTOR

IDENTIFICATION
MATRIX

LEVELS OF SERIOUSNESS	SERIOUS	AVERAGE	NEGLIGIBLE
<p><u>"SAMPLING"</u> Criteria</p> <p>Unavailability of criterion inputs for use in training</p>	<p>-Some criterion inputs <u>rarely</u> occur;</p> <p>-Waiting for their spontaneous occurrence would require a <u>long</u> time</p>	<p>-Some criterion inputs occur with <u>moderate</u> frequency</p> <p>-Waiting for their spontaneous occurrence would require a <u>moderate</u> amount of time</p>	<p>-All criterion inputs occur <u>frequently</u></p> <p>-Waiting for their spontaneous occurrence would require <u>little</u> time</p>
<p><u>"STANDARDIZATION"</u> Criteria</p> <p>Unavailability of properties of criterion inputs to be included in training</p>	<p>-Waiting for spontane- ous occurrence of <u>all</u> properties is a <u>major</u> problem;</p> <p>-Would <u>seriously</u> interfere with learning</p>	<p>-Waiting for spontane- ous occurrence of <u>all</u> properties is a <u>moderate</u> problem;</p> <p>-Would <u>moderately</u> interfere with learning</p>	<p>-Waiting for spontane- ous occurrence of <u>all</u> properties is a <u>minor</u> problem;</p> <p>-Would <u>not</u> interfere with learning</p>
<p><u>"MANIPULATION"</u> Criteria</p> <p>Inability to alter or present criterion inputs, actions, or outputs</p>	<p>-<u>Considerable</u> problem in overcoming learning difficulties (regard- ing discriminations, generalizations, or associations)</p>	<p>-<u>Moderate</u> problem in overcoming learning difficulties (regard- ing discriminations, generalizations, or associations)</p>	<p>-<u>Little</u> problem in overcoming learning difficulties (regard- ing discriminations, generalizations, or associations)</p>

EXAMPLE

FACTORS TO CONSIDER	SAMPLING	STANDARDIZATION	MANIPULATION
DEGREE OF SERIOUSNESS			
<p>SERIOUS: High Need to Simulate</p>	<p>e.g., astronomer has to observe and make records of eclipses</p> <p>The infrequent occurrence of eclipses makes simulation (film, animation, photographs) necessary to train the astronomer-trainee.</p>	<p>e.g., a teacher has to be able to recognize social and emotional symptoms in the classroom</p> <p>Training cannot wait for them all with all relevant properties present to show up by themselves. Simulation (e.g., film) allows sampling of all relevant types and all relevant properties that help identify problems.</p>	<p>e.g., a medical diagnosis of a benign or malignant condition depends on being able to discriminate between highly similar appearing symptoms</p> <p>It is <u>not</u> possible to manipulate conditions of actual patients. Simulation (in photographs or in print) allows wide differences to be created and gradually narrowed so that the difficult discriminations can be made.</p>
<p>AVERAGE: Medium Need to Simulate</p>	<p>e.g., the instructional developer has to interpret various patterns of test results reflecting on the adequacy of his instructional materials</p> <p>Learning to interpret results depends on being able to see the variety. In actual settings this might take a fair amount of time. Contrived (simulated) results can solve this problem.</p>		
<p>NEGLIGIBLE: Low Need to Simulate</p>	<p>e.g., the student of a foreign language has to have practice in translating combinations of "he," "she," and "it" and the verb "to be."</p> <p>These occur often enough <u>by themselves</u> in most books without the need to simulate such situations.</p>	<p>e.g., developer of photographs has to be able to distinguish between overexposed and underexposed photographs.</p> <p>A sample of actual photographs containing all relevant properties on which the distinction is to be made can be readily obtained and used in training or that can be standard for all trainee-developers.</p>	<p>e.g., a TV repairman has to diagnose differentially between conditions which are <u>grossly</u> different in criterion situations.</p> <p>There is no need to manipulate symptoms from wide to narrow differences. The gross differences themselves can readily be created and presented on an actual TV set.</p>

JOB PROCEDURES

E.1.2	Logistical or instructional factors suggesting need for simulation	Rated need for simulation		Top portion of FORM E.1(1)
E.1.3		Made decision whether to simulate		

STEP

E.2

E.2

Plan type of simulation to be used (when needed).

E.2.1

Identify from task analysis diagrams and from mode analysis results key properties of inputs, actions, or outputs which require simulation. Record results.

E.2.2

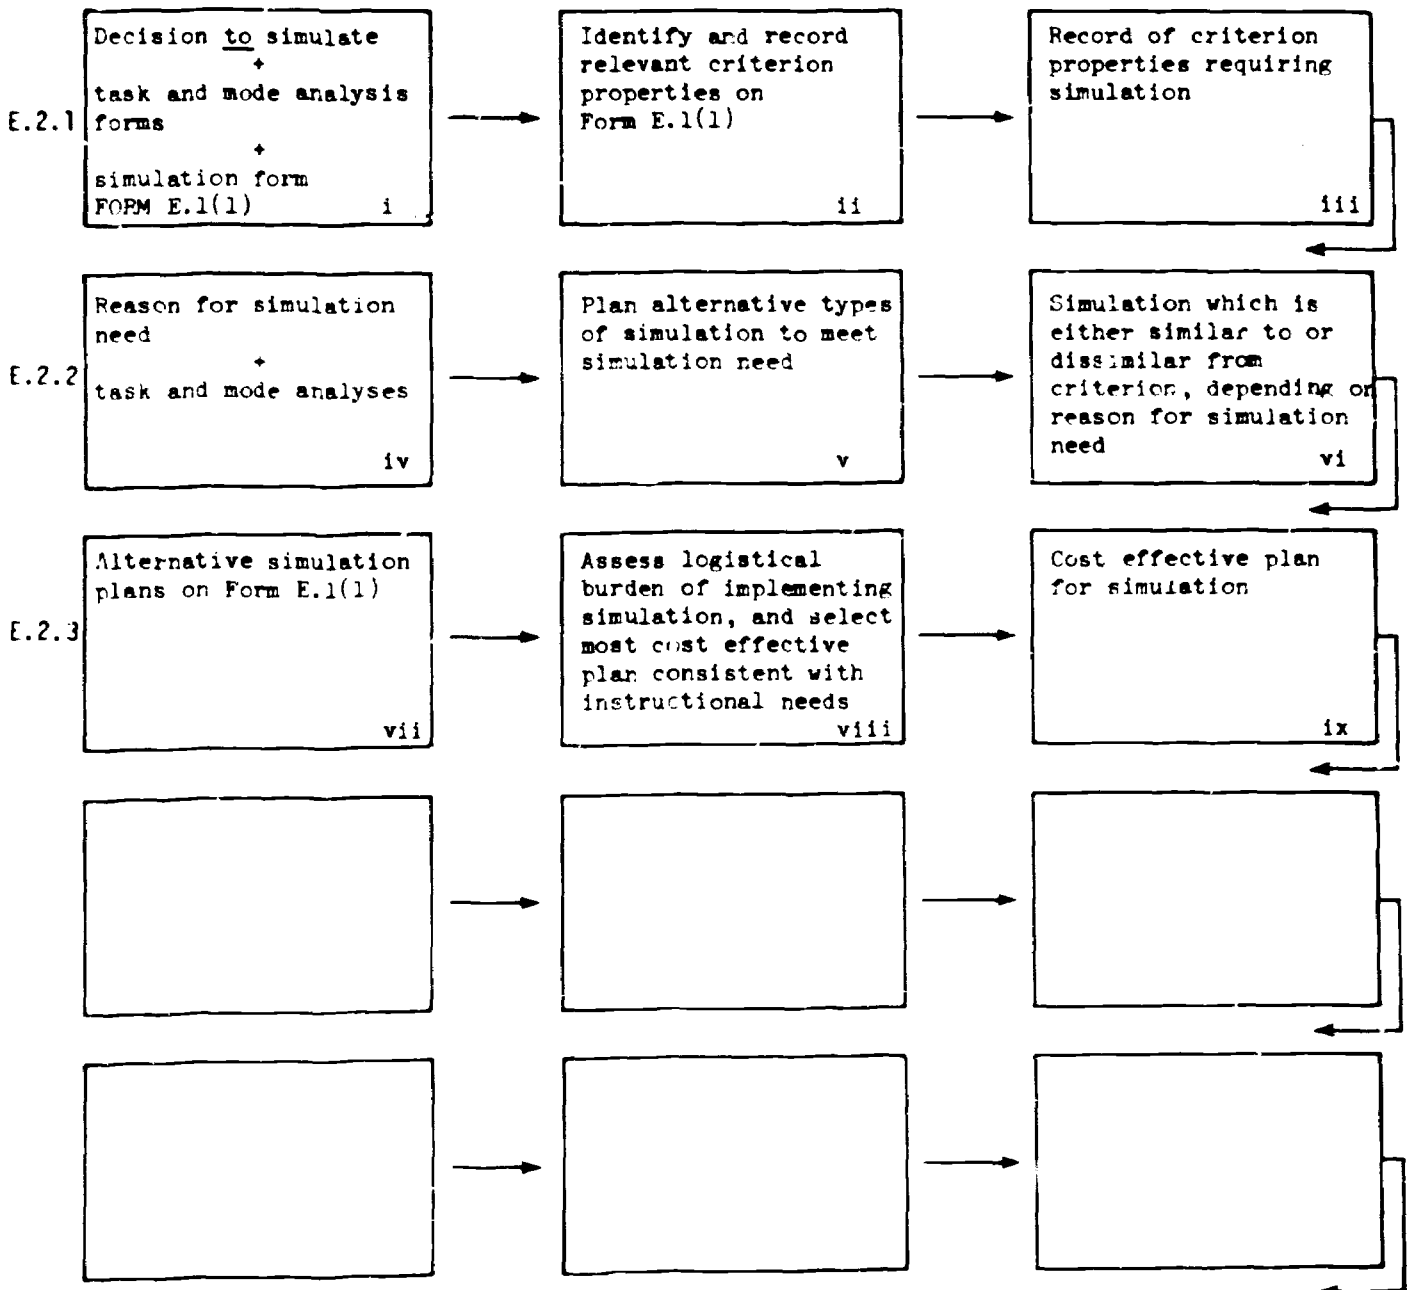

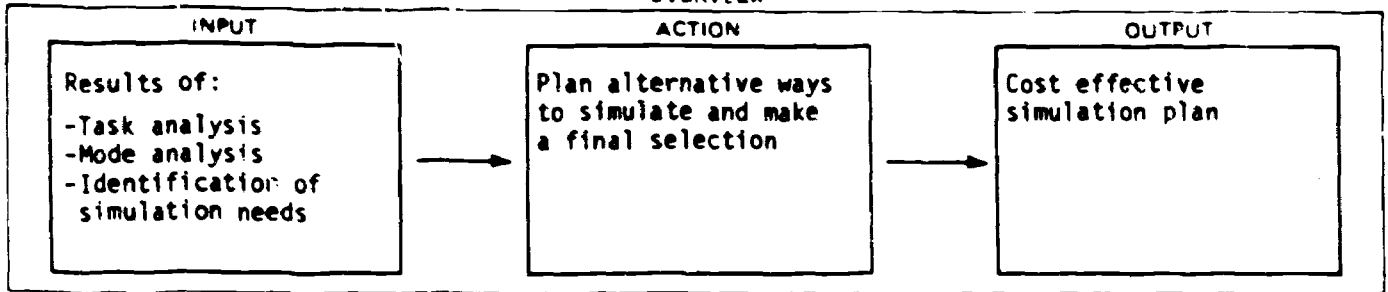

Plan and record the simulation of inputs, actions, and outputs.

E.2.3

Select a simulation plan which both meets instructional needs and does not create an unacceptable logistical burden.

E.2.2

DETERMINING HOW TO PRODUCE SIMILARITY OR DISSIMILARITY
BETWEEN SIMULATED AND CRITERION SITUATIONS

DECISION
MATRIX

CONDITIONS	Instructional or logistical need to produce SIMILARITY between simulated and criterion situations	Instructional need to produce DISSIMILARITY between simulated and criterion situations
ACTION TO TAKE	<p>-Make <u>properties of simulated</u> <u>inputs, actions, or outputs:</u> as nearly identical as possible with <u>criterion</u> inputs, actions, or outputs</p> <ul style="list-style-type: none"> •Identity of mode •Identity in number and type of properties •Identity in realism 	<p>-Change <u>properties of criterion</u> <u>inputs, actions, or outputs:</u></p> <ul style="list-style-type: none"> •Change in mode •Change in number of properties •Change in realism •Making the simulated and the criterion situation different
SEE EXAMPLES ON PAGES	55	56

IDENTIFICATION
MATRIX

CRITERIA FOR IDENTIFYING SIMILARITY
BETWEEN SIMULATED AND CRITERION INPUTS, ACTIONS, OR OUTPUTS

TYPE OF SIMILARITY	Similarity in MODE of inputs, actions, or outputs	Similarity in NUMBER AND TYPE OF PROPERTIES of inputs, actions, or outputs	Similarity in DEGREE OF REALISM of inputs, actions, or outputs
CRITERIA	<p><i>Simulated mode is made as nearly identical with criterion mode</i></p> <p style="text-align: center;"><u>INPUT/OUTPUT MODE</u></p> <p>Visual/audio/etc.</p> <p>-Verbal/non-verbal</p> <p>-Physical/conceptual/behavioral</p> <p style="text-align: center;"><u>ACTION MODE</u></p> <p>-Recognition/editing/production</p> <p>-Perceptual/motor/vocal/sub-vocal</p>	<p><i>The number and types of properties built into simulation is as nearly identical with those in criterion situation</i></p> <p style="text-align: center;"><u>INPUT/OUTPUT PROPERTIES</u></p> <p>-Physical properties:</p> <ul style="list-style-type: none"> •Size, shape, color, etc. <p>-Psychological properties:</p> <ul style="list-style-type: none"> •Conceptual, symbolic •Behavioral <p style="text-align: center;"><u>ACTION PROPERTIES</u></p> <p>-Physical properties:</p> <ul style="list-style-type: none"> •Direction, duration, etc. <p>-Psychological properties:</p> <ul style="list-style-type: none"> •Conceptual/behavioral 	<p><i>Simulated and criterion situations share the same degree of realism</i></p> <p style="text-align: center;"><u>INPUT/OUTPUT REALISM</u></p> <p>-Realism of:</p> <ul style="list-style-type: none"> •Objects •People •Events <p><u>Actual vs. reproductions</u></p> <p style="text-align: center;"><u>ACTION REALISM</u></p> <p>-Physical realism</p> <p>-Psychological realism</p>
EXAMPLES OF SIMULATION WHICH IS <u>SIMILAR TO</u> THE CRITERION	<p style="text-align: center;"><u>INPUT MODE</u></p> <p>-<u>Criterion input</u>:</p> <ul style="list-style-type: none"> •Spoken French (to be understood) <p>-<u>Simulated input</u>:</p> <ul style="list-style-type: none"> •Recorded French (tape) <p>Mode of inputs is similar; inputs are both oral/audio</p> <p style="text-align: center;"><u>ACTION MODE</u></p> <p>-<u>Criterion action</u>:</p> <ul style="list-style-type: none"> •Spoken reply in French <p>-<u>Simulated action</u>:</p> <ul style="list-style-type: none"> •Records reply on tape <p>Mode of action is similar: <u>producing</u> an <u>oral</u> reply</p>	<p style="text-align: center;"><u>INPUT PROPERTIES</u></p> <p>-<u>Criterion input</u>:</p> <ul style="list-style-type: none"> •Shape and color of type of leave (to be identified) <p>-<u>Simulated input</u>:</p> <ul style="list-style-type: none"> •Color photograph of leaf <p>Simulation presents the two key properties</p> <p style="text-align: center;"><u>ACTION PROPERTIES</u></p> <p>-<u>Criterion action</u>:</p> <ul style="list-style-type: none"> •Names the type of leaf <p>-<u>Simulated action</u>:</p> <ul style="list-style-type: none"> •Names the type of leaf <p>The manner of identification is the same</p>	<p style="text-align: center;"><u>REALISM OF INPUTS</u></p> <p>-<u>Criterion input</u>:</p> <ul style="list-style-type: none"> •Customers at sales counter <p>-<u>Simulated input</u>:</p> <ul style="list-style-type: none"> •Actors at sales counter <p>Simulation involves "live" people</p> <p style="text-align: center;"><u>REALISM OF ACTIONS</u></p> <p>-<u>Criterion action</u>:</p> <ul style="list-style-type: none"> •Tells customer what he wants to know <p>-<u>Simulated action</u>:</p> <ul style="list-style-type: none"> •Tells actor what he wants to know <p>Both involve "live" performance</p>

E.2.2

EXAMPLES

EXAMPLES OF SIMULATION VARYING IN THE DEGREE OF SIMILARITY TO THE CRITERION:
SAME CRITERION EXAMPLE USED THROUGHOUT, I.E., "TEACHER USE OF CONTINGENCY MANAGEMENT TECHNIQUES"

DEGREE OF SIMILARITY		HIGH		MEDIUM		LOW	
MODE		<u>CRITERION</u>	<u>SIMULATION</u>	<u>CRITERION</u>	<u>SIMULATION</u>	<u>CRITERION</u>	<u>SIMULATION</u>
	Inputs	Desirable student behavior	Actors displaying desirable behavior	Desirable student behavior	Actors displaying desirable behavior	Desirable student behavior	Verbal description of desirable student behavior
	Action	Delivers verbal praise	Actors displaying desirable behavior	Delivers verbal praise	Writes on paper--what she would say	Delivers verbal praise	Writes on paper--what she would say
	Outputs	Change in student behavior	Change in behavior of student actors	Change in student behavior	Verbal feedback is provided	Change in student behavior	Verbal feedback is provided
		Simulation preserves visual mode of inputs/outputs and verbal/production mode of actions.		There is a deviation in mode of action and of output.		Visual/nature of input/output is changed; oral action is changed to writing.	
NUMBER/ TYPE OF PROPERTIES		<u>CRITERION</u>	<u>SIMULATION</u>			<u>CRITERION</u>	<u>SIMULATION</u>
	Inputs	Student does <u>not</u> exceed previous number of minutes of work for which he was reinforced. <u>Student says he has improved.</u>	Live actors; identical durations used			Student does <u>not</u> exceed previous number of minutes of work for which he was reinforced.	Live actors; identical durations used
	Action	Withholds reinforcement (ignores)	Withholds reinforcement or says she would withhold			Withholds reinforcement (ignores)	Withholds reinforcement or says she would withhold
	Outputs	Disappointed look in student	Disappointed look in student			Disappointed look in student	Disappointed look in student
		Key property of duration is adequately simulated; it is the basis for the discrimination when to reinforce and when not to.				The key property of student pleading has been omitted.	
DEGREE OF REALISM		<u>CRITERION</u>	<u>SIMULATION</u>	<u>CRITERION</u>	<u>SIMULATION</u>	<u>CRITERION</u>	<u>SIMULATION</u>
	Inputs	Desirable student behavior	Actors displaying desirable behavior	Desirable student behavior	Film of students exhibiting desirable behavior	Desirable student behavior	Still photographs or verbal description of desirable student behavior
	Action	Delivers verbal praise	Actors displaying desirable behavior	Delivers verbal praise	Talk out loud (giving verbal praise)	Delivers verbal praise	Talk out loud (giving verbal praise)
	Outputs	Change in student behavior	Change in behavior of student actors	Change in student behavior	Change in student behavior	Change in student behavior	Change in student behavior
		Simulation is "live," similar to criterion.		Film simulation departs from realism of "live" situation.		Simulation is a marked departure from "live" situation.	

E.2.2

EXAMPLES INDICATING DIFFERING DEGREES OF
DEVIATION BETWEEN SIMULATED AND CRITERION SITUATIONS

EXAMPLES

TYPE OF DEVIATION	MORE ACCEPTABLE SIMULATION	LESS ACCEPTABLE SIMULATION
Deviation in MODE	<p style="text-align: center;"><u>Criterion action</u></p> <p style="text-align: center;">Handling (at the production level) radioactive materials</p> <p style="text-align: center;"><u>Simulated action</u></p> <p style="text-align: center;">Editing or critiquing the handling by another (live or on film) of the radioactive materials</p> <p style="text-align: center;"><u>Simulated action</u></p> <p style="text-align: center;">Selecting (recognition practice) which of two ways to handle radioactive materials</p> <p>Editing or critiquing comes closer to the criterion than merely selecting from options. (However, in "preparatory" practice, recognition practice can play a useful role.</p>	
Deviation in NUMBER/TYPE OF PROPERTIES	<p style="text-align: center;"><u>Criterion input</u></p> <p style="text-align: center;">Performance of a symphony: Direction of sounds of choirs and balances</p> <p style="text-align: center;"><u>Simulated input</u></p> <p style="text-align: center;">Stereo recording</p> <p style="text-align: center;"><u>Simulated input</u></p> <p style="text-align: center;">Monophonic recording</p> <p>The stereo recording will more faithfully reproduce directionality and balance and allow discriminations about both of them to be made.</p>	
Deviation in DEGREE OF REALISM	<p style="text-align: center;"><u>Criterion input</u></p> <p style="text-align: center;">Facial expression of customer (student, employee)</p> <p style="text-align: center;"><u>Simulated input</u></p> <p style="text-align: center;">Film of facial expressions of customers</p> <p style="text-align: center;"><u>Simulated input</u></p> <p style="text-align: center;">Animated film showing facial expressions of customers</p> <p>The animated version (deviating in realism) might either caricature facial expressions or fail to provide adequate (e.g., subtle enough) cues which form the basis for discriminations and decisions about the customer's mood.</p>	

DECISION
MATRIX

CONDITIONS	Plans to deviate from criterion MODE	Plans to deviate from criterion NUMBER OR TYPE OF PROPERTIES	Plans to deviate from criterion DEGREE OF REALISM
ACTION TO TAKE	<p><u>Select mode which:</u></p> <ul style="list-style-type: none"> -Attempts to preserve key properties -Is a high strength substitute that is functionally equivalent, i.e., allows discriminations, generalizations, or associations to be acquired -A concrete verbal description vs. an abstract description simulating a visual object 	<p><u>Plan deviation from number or type of properties:</u></p> <ul style="list-style-type: none"> -Which represents the least deviation: <ul style="list-style-type: none"> •Keeps as many properties present •Keeps the types of properties as close as possible to criterion -Is a high strength substitute that is functionally equivalent, i.e., allows discriminations, generalizations, or associations to be acquired 	<p><u>Select degree of realism which:</u></p> <ul style="list-style-type: none"> -Preserves key properties -Is a high strength substitute that is functionally equivalent, i.e., allows discriminations, generalizations, or associations to be acquired

EXAMPLES	<p>e.g., <u>teacher training</u></p> <p><u>Criterion</u> action: Orally delivering verbal praise as reinforcement</p> <p><u>Simulated</u> action: Writing what she would say when delivering verbal praise</p> <p>The content of <u>what</u> is said is the key property here, and simulation is functionally equivalent to criterion; while <u>oral</u> practice would be ideal, the description used is not critical</p>	<p>e.g., <u>botany</u></p> <p><u>Criterion</u> inputs: Leaves to be identified on basis of size, color, shape</p> <p><u>Simulated</u> inputs: Black and white photographs and verbal description of color</p> <p>Key properties (size and shape are ideally simulated); color is identified in words, making it possible to distinguish between types of leaves</p>	<p>e.g., <u>teacher training</u></p> <p><u>Criterion</u> inputs: Children exhibiting problem behavior (which the teacher has to manage)</p> <p><u>Simulated</u> inputs: A film of problem behavior</p> <p>The film allows a realistic representation of key properties that determine which management technique to use</p>

IDENTIFICATION
MATRIX

FACTORS	When simulation is to be used in criterion practice, in testing, or in preparatory practice: COST	When simulation is to be used in criterion practice, in testing, or in preparatory practice: ADMINISTRATION
CRITERIA	<p style="text-align: center;"><u>COST OF:</u></p> <ul style="list-style-type: none"> -Preparing simulation -Using simulation <ul style="list-style-type: none"> •Equipment •Space -Using personnel to administer -Preparing new versions of simulation as required 	<p style="text-align: center;"><u>ADMINISTRATIVE PROBLEMS DUE TO:</u></p> <ul style="list-style-type: none"> -Need of personnel to prepare simulation -Need of personnel to administer simulation -Complexity of administration and potential need to train personnel to administer -Complexity of scheduling based on potential simulation (e.g., equipment/trainee ratios)
EXAMPLES	<p>e.g., cost of preparing film or animation to be used for simulation of criterion situations are likely to be expensive</p> <p>e.g., if frequent changes in the nature of the criterion situation occur, simulation, which is expensive to begin with and which may have to be altered frequently, becomes prohibitive</p>	<p>e.g., non-automated simulation of complex equipment may require the use of people to run the equipment</p> <p>e.g., simulated equipment may increase training time if of necessity trainee/simulation ratio must be high</p>

E.2.3

EXAMPLES OF SIMULATION VARYING IN DEGREES OF LOGISTICAL BURDEN
DUE EITHER TO COST OR TO ADMINISTRATIVE CONSIDERATIONS

EXAMPLES

COMPARATIVE DEGREE OF BURDEN

BURDEN DUE TO 	CRITERION TO BE SIMULATED 	HIGHER 	MIDDLE 	LOWER 
COST	Driving a car	e.g., simulated three-dimensional car: with film for displaying both driving conditions and results of actions taken; provision for actually taking action	e.g., film of driving conditions; verbal responding by trainee to indicate action to be taken; verbal feedback about correctness	e.g., verbal description of driving conditions; verbal description by trainee to indicate action to be taken; verbal feedback about correctness
ADMINISTRATIVE CONSIDERATIONS	Comprehending and speaking a foreign language	e.g., each student has a personal tutor who speaks to and listens to student This introduces problem (not only of cost) of scheduling.	e.g., use of tape recorders with pre-recorded inputs; -student records responses -correct response is on tape; learner compares his own response with correct response	e.g., use of tape recorders with pre-recorded inputs; -student records responses -correct response is on tape; learner compares his own response with correct response

E.2.3

DECISION
MATRIX

DETERMINING HOW TO SELECT FROM AMONG
SIMULATION PLANS DIFFERING IN LOGISTICAL BURDEN

CONDITIONS	LOGISTICAL BURDEN of instructionally <u>optimum</u> simulation plan is <u>low</u> to <u>medium</u>	LOGISTICAL BURDEN of instructionally <u>optimum</u> simulation plan is <u>medium</u> to <u>high</u>
ACTION TO TAKE	-Select the <u>instructionally optimum</u> simulation plan	-Select the simulation plan •Which can be produced within acceptable or allowable logistical limits AND •Which, at the same time, maximizes the instructional purpose of simulation •Maximizes <u>similarity</u> between criterion and simulation OR •Is capable of creating dissimilarity

EXAMPLES	CRITERION	
	SIMULATION PLANS	
	<p>Salesman (teacher, supervisor) reacts to customer's (student's, subordinate's) tone of voice</p> <ol style="list-style-type: none"> (1) Trainee responds to live actors (2) Trainee records responses to filmed presentation (3) Trainee writes responses after seeing photographs 	
	<p>The budget available for the training program is large.</p> <p>Use of live actors, although expensive, when used with many trainees is the most preferable. This type of simulation allows for key properties of inputs (customer's facial expression), actions (salesman's response), and outputs (customer's reaction) to be represented.</p>	<p>On a severely limited budget, simulation involving photographs and written responses.</p> <p>If photographs display enough key properties, they may be adequate to the task.</p> <p>A criterion verbal response (simulating an oral response) can be effectively used.</p>
